NLCD_open_and_low_int *Process the National Land Cover Database for 'Wastewater' function*

Description

'NLCD_open_and_low_int' writes 1 netcdf file per state within the domain as well as a csv. These netcdf files have the 30 m National Land Cover Database Developed, Open Space and Developed, Low Intensity land cover types for each state. The csv provides the total area covered by these two land cover types for each state separately. This information is used in 'Wastewater' to map septic emissions.

Usage

```
NLCD_open_and_low_int(  
  NLCD_file,  
  domain,  
  domain_template,  
  State_Tigerlines,  
  state_name_list,  
  output_directory  
)
```

Arguments

NLCD_file	Character providing the full filepath to the National Land Cover Database. This data is available at https://www.mrlc.gov/data . This is a geotif of 30 m land cover data for the Continental United States where different values represent the different land cover classifications. There is an example file in the package's datasets folder that has been successfully used in this code available for reference.
domain	SpatVector polygon outlining the desired output area
